"Never Ending Growth"

### Reinitiate coverage with BUY, TP of Rp2,491

We reinitiate coverage on SMSM with a BUY recommendation and Target Price of Rp2,491, implying PER FY12-13 of 15.2x-14.0x. Our BUY call is underpinned by: 1) consistent sales growth and stable margins, 2) room to increase production and therefore sales volume, 3) the company's generous dividends policy. In determining our TP, we use a DCF valuation with 3.0% terminal growth and 11.8% WACC. The stock is attractively valued and currently trades at PER FY12-13 of 12.8x-11.1x.

Danareksa

### Consistent Growth at the Top and Bottom lines

The company has a sound track record and has recorded 19-year CAGR growth in revenue of 26%. The source of growth has come from: 1) SMSM's ability to offer quality products at competitive prices, 2) strong car sales growth on the domestic market, and 3) the positive impact of global economic growth on demand for its products. Margins are also firm. SMSM has been able to maintain its net profit and EBITDA margins at around 11% and 21%, respectively, thanks to strong pricing power which has compensated for cost increases.

### Plenty of Room to Capture Growth

Installed capacity is currently 96 mn units/year for filters and 1.95 mn units/year for radiators. SMSM increased capacity for both filters and radiators in 2010. At the present time, the utilization rate is 54% for filters and 44% for radiators, providing ample room for the company to capture further growth. SMSM will spend about Rp100 bn per year on routine capex, which can easily be financed by internal cash flow.

### Attractive Dividends

In the past three years, SMSM has distributed nearly all of its net profits as dividends (DPR above 90% in FY08-10). This is double the company's stated policy of a payout ratio of 45% if net profits are above Rp30 bn. Nonetheless, despite the very generous dividends payout, the company has been able to maintain its gearing around 40%, a healthy level in our view. For fiscal year 2011, we expect the company to distribute final dividends of Rp50/share, translating into a DPR of 72% and dividend yield of 2.4%. At the end of 2011, interim dividends of Rp50/share were distributed.

Danareksa research reports are also available at Reuters Multex and First Call Direct and Bloomberg.

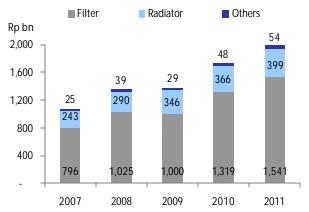

# Consistent growth at the top and bottom lines

#### **Main Products: Filters and Radiators**

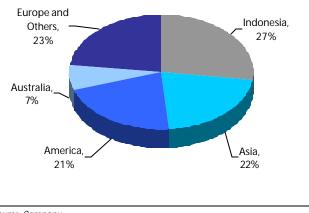

SMSM manufactures filters under the Sakura brand and radiators under the ADR brand. Sakura filters have more than 4,000 part numbers available covering oil, fuel, air, hydraulic, and separator filters for automotive, commercial, and heavy equipment. More than 90% of SMSM filters and radiators are sold to the replacement market with the rest sold to the OEM market.

In 2011, filter sales contributed 77% to SMSM's total revenues, radiator sales 20%, and sales of other products the remaining 3%. In regard to the sales destination, the domestic and Asia markets were the major sales destinations for filters. For radiators, however, America was the major sales destination. The export market accounted for 73% of SMSM's revenues in total. Another way of looking at it is that SMSM's revenues are mostly driven by filter sales to the export replacement market (they account for 58% of SMSM's total revenues).

### **Good Quality Products at Affordable Prices**

Filters and radiators are considered important parts since they directly affect the car's performance and reliability. Thus, most customers will choose carefully and give careful consideration to the quality of those parts whilst also bearing in mind that the price should be affordable. To satisfy the buyers' needs, SMSM delivers good quality products at affordable prices. This is why SMSM has consistently been competitive even though there are many Chinese-made products sold at very low prices in the marketplace.

In the domestic market, SMSM has a 40% share of the replacement market for filters and radiators. Its closest competitors are the OEM parts. From our sample check in regard to pricing, SMSM products are priced 28-32% lower than OEM parts for filters and around 15% lower than OEM parts for radiators. In the international market, SMSM Sakura filters and ADR radiators are sold in more than 100 countries, including Asia, Australia, America, and Europe. SMSM products meet the international minimum requirements, and can therefore be recognized as having the same quality as the OEM parts but are sold at a more competitive price. In our forecast, we expect a moderate increase in average selling prices: 5% CAGR for filters and 4% CAGR for radiators from 2012-2014.

Toyota Avanza air filter	85,000	125,000
Toyota Avanza radiator	675,000	800,000

Source: Danareksa

### **Domestic and Global Market Outlook**

SMSM's export sales have increased by 5-year CAGR of 12%. Growth in the global economy and more cars on the road in the region are the drivers of SMSM's export sales. According to the IMF, global GDP growth will face a slowdown in FY12-13, but growth shall still reach around 5%. As such, we still believe that demand for SMSM's products will increase. In a tougher economic climate, customers prefer to find more affordable car parts of the same quality as the more expensive OEM parts. Furthermore, SMSM also plans to increase the number of export destinations as a strategic move. By achieving greater diversification, the company will be less affected if there is turmoil in one region.

SMSM's domestic sales have increased by 5-year CAGR of 20%. Looking ahead, domestic sales should continue to track car sales growth, which is still in a growth trend. In 2011, Indonesia's car sales volume reached 850k, setting a new record. For 2012, Gaikindo (the Indonesian Automotive Industries Association) predicts sales to reach 950k. The growth of domestic car sales is being driven by the growth in Indonesian GDP, low and stable bank interest rates, and attractive offers from ATPM. Some car manufacturers in Indonesia plan to launch several new models in 2012, including low-price cars. Toyota, as one of the market leaders, also wants to increase local content in its Indonesian produced cars (up to 80% in the next three years. Although the automobile industry faces some challenges, notably the increase in the minimum down-payment to 30% and uncertainty in regard to planned fuel price hikes, car sales should still continue to grow as the economy expands further.

Volume wise, sales of filters and radiators have increased by 5-year CAGR of 5% and 13%, respectively. For 2012-2014, we forecast moderate sales volume growth of 7.5% CAGR for both filters and radiators.

### Solid Revenues Growth with Maintained Margins

SMSM has recorded consistent growth since 1992, even during times of crisis such as in 1998 (the Asian crisis), 2008 (the crisis in America) and from 2009 till now (the crisis in Europe). This demonstrates the resilience of the demand for the company's products. SMSM booked revenues of around Rp1,800 bn in 2011 and is expected to book more than Rp2,000 bn in revenues in 2012 according to our estimates.

SMSM has maintained its gross margin at 23-25% over the last five years despite fluctuations in the prices of its raw materials. In this period net margins were maintained at 8-11%. This owes to active inventory management, better machine efficiency, and the company's effective distribution channels which enable the company to remain competitive. For 2012-2014 we forecast moderate revenues and net profits growth of 12% CAGR, or within the range of the company forecast for revenues growth of 10-15%.

### Exhibit 7. 19 Consecutive Years of Sales Growth

Source: Company

Sales Gross Margin Operating Profit — Net Margin Rp bn 2,000 30% 1,750 25% 1,500 1,250 20% 1,000 15% 750 500 10% 250 5% -2007 2008 2009 2010 2011

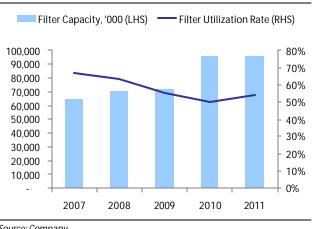

### Exhibit 8. Maintained Margins

Source: Company

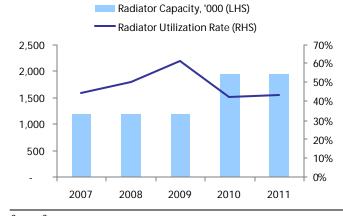

# Plenty of room to capture growth

SMSM raised production capacity in 2010 to 96 mn units/year for filters and to 1.95 mn units/ year for radiators. In 2011, the company produced 51 mn filters and 848k radiators. From this we can conclude that SMSM's utilization rate is still low - only 54% for filters and 44% for radiators. As such, there is plenty more room to raise production, meaning the company can achieve higher sales if demand increases.

Exhibit 10. Radiators' Utilization Rate

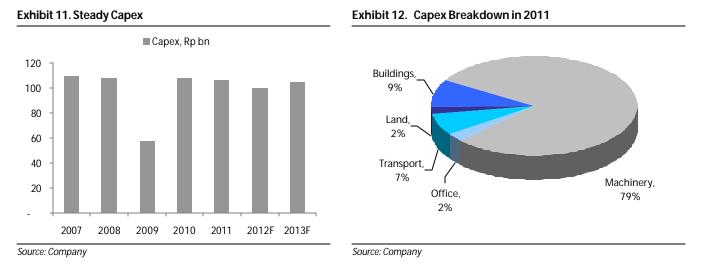

### Exhibit 9. Filters' Utilization Rate

Source: Company

Source: Company

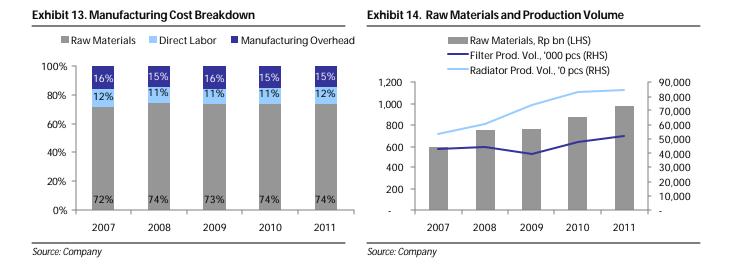

SMSM projects 2012 capex of around Rp100 bn, mainly for machine maintenance. Historically, capex has been funded from its operating cash flow. Going forward, the company will expand and will need more capex when its production utilization reaches more than 80% - which is still far away. With this assumption, we expect that the company's cash flow shall be enough to fund its capex without the need for the company to take on any additional debts in 2012-2014.

SMSM's manufacturing cost structure has been relatively stable. Of its manufacturing costs in 2011, 74% came from raw materials costs, with 12% being direct labor and 15% being manufacturing overheads. SMSM has to import raw materials since local producers cannot

meet SMSM's minimum requirements for its products. The main raw materials used by SMSM

are steel plates, paper, aluminum, cooper, and brass. As the company has stated, raw materials are purchased on a spot basis, so any increase in prices will be immediately passed on to customers. An unexpected increase in raw materials prices may squeeze margins, however, as there is a time lag before the higher costs can be passed on to the customers via higher prices. To reduce this risk, the company tries to practice good inventory management (up to two to three months' needs), so price fluctuations can be anticipated.

# 🔘 Danareksa

7

# Attractive dividends

Historically, SMSM has distributed dividends generously to its shareholders. In the last 3 years, the dividend payout has reached a minimum 90% of its net profit. In 2011, the company distributed dividends of Rp50 per share, reaching 35.84% of its 2011 net profit. In view of the company's dividend policy, the company should distribute a minimum additional 10% from its 2011 net profit for its final dividend. We expect a final dividend for fiscal year 2011 of Rp50/share, translating into a DPR of 72% and dividend yield of 2.4%. Despite the very generous dividends payout, the company has been able to maintain its gearing around 40%, a healthy level in our view.

Among its peers, SMSM's dividend yield is larger and above the industry average. With the potential upcoming dividend payment for fiscal year 2011, SMSM's dividend yield is very attractive at the moment.

# Valuation

We arrive at a Target Price of Rp2,491. We use a Discounted Cash Flow valuation with 8.5% risk free rate, 5.5% risk premium, and 3.0% terminal growth. Our TP implies PER FY12-13 of 15.2x-14.0x. Currently the stock trades at PER FY12-13 of 12.8x-11.1x, or lower than the industry average of PER FY12-13 of 13.1x-11.2x.

# A brief profile

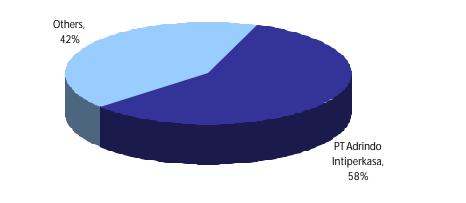

PT Selamat Sempurna Tbk. was established in Indonesia on January 19, 1976 under the flagship of the ADR Group (automotive division) and listed on the Indonesia Stock Exchange in 1996 with the ticker "SMSM". SMSM manufactures filters, radiators, oil coolers, condensers, brake pipes, fuel pipes, fuel tanks, exhaust systems, and press parts. SMSM is currently known as one of the largest manufacturers of filters and radiators in the region.

In 2010, SMSM issued Selamat Sempurna II Year 2010 Bonds Payable with a fixed rate coupon payment, rated "id AA-" by Pefindo. The bond's total nominal value is Rp240 bn, of which each series' nominal value is Rp80 bn. The funds were used to repay the company's bank loans, increase its working capital, and to purchase raw materials needed for production. The Series A bonds already matured in July 2011 and the bondholders were fully repaid.
